## RUSH RIVER

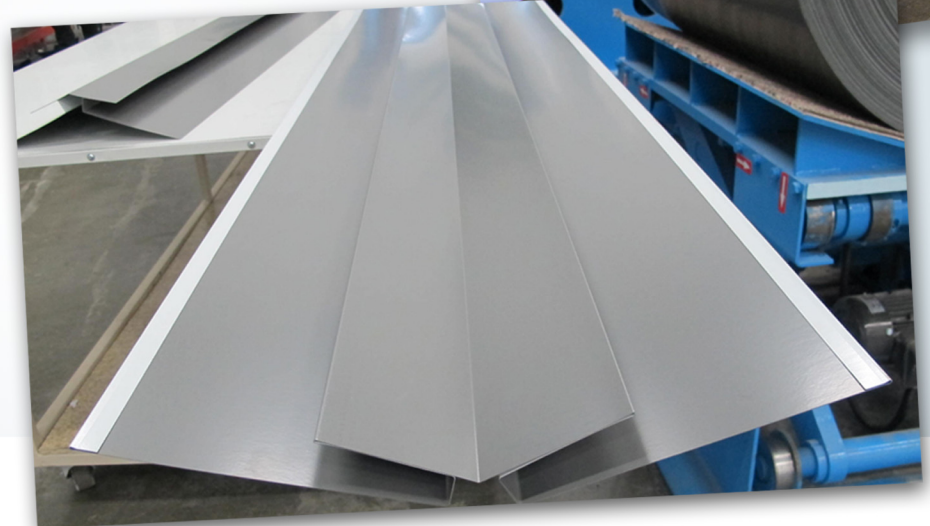

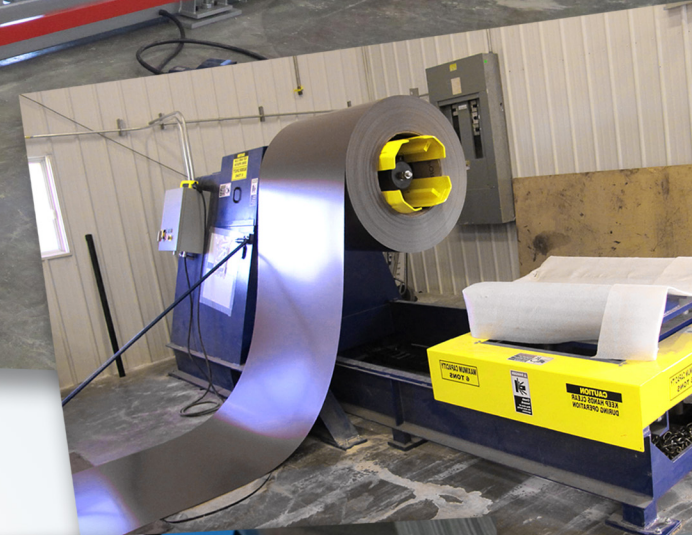

### steel & trim

#### Metal Fabrication - New state of the art equipment!

Rush River Steel & Trim has been in the metal fabricating business for over a decade. We began with fabricating commercial truck parts and high end OEM parts for local manufactures. We are used to manufacturing tight tolerance parts and providing reliable customer service. In early 2011 we decided to expand our metal fabricating capabilities and began manufacturing corrugated steel and trim for the commercial, agriculture and residential market.

With our state of the art 21' grip feed double acting folder, designing and building any custom trim is commonplace. Any trim between 2'-21' is no problem.

Rush River Steel is also pleased to offer two different profiles in twenty different colors: Tuff-Rib Panel, a very popular profile for the Agriculture and Residential market and PBR Panel, a popular profile for commercial and architectural buildings. Rush River is excited to be in this industry and looks forward to working with you in the future.

### Selection:

Rush River Steel offers not only custom trim, but insulation, butyl tape, caulking, touch-up paint, pipe boots, vent ridge, inner and outer closures. We also have screws and pop rivets to match your desired panel color.

### Our Warranty:

By providing our clients with the Valspar weatherX sr silicone polyester 40 yr. paint warranty you'll have our assurance of the best possible quality available! Our paint system comes with an exclusive "cool touch" energy star rating. We stand behind our products as well as our workmanship.

### Delivery & Service:

Rush River Steel & Trim has delivery options available, right to the jobsite. No forklift, no problem! We have a piggyback forklift to unload at any remote yard. We offer all the necessary installation hardware and accessories to finish off your corrugated steel job!

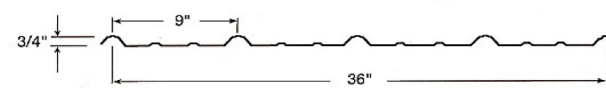

We strive to get your order ready for pickup or delivery as soon as we receive a purchase order. While 24 hour turnaround is our goal, peak production times sometimes prevent that from happening. Nevertheless, we are committed to giving you outstanding service at unbeatable value!

### Tuff Rib Panel:

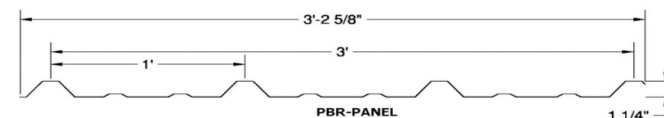

This low profile panel is one of the most popular designs on the market. Tuff Rib is available in 20 different colors. It features .75 high ribs and 9" center intermediate stiffening ribs, this panel is designed for residential, agricultural and post frame applications. Rush River Steel and committed to giving you a standard 29 (0155m) gauge panel as a standard thickness for Tuff Rib Panel. Liner Panel is .0144 as standard. G90 is available for animal confinement buildings.

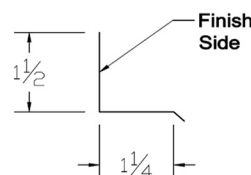

### Tuff Rib Panel Specs:

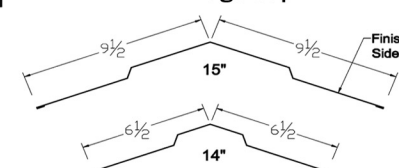

### PBR Panel Specs:

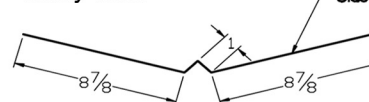

### Drip Cap Specs:

### 14" Ridge Cap:

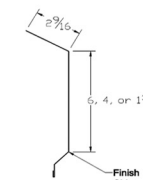

### Valley Trim:

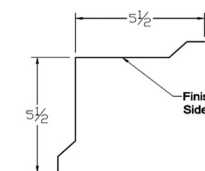

### 5"x5" Rake and Corner:

### Eave Trim:

### Inside Corner Specs:

### PBR Panel:

This higher profile panel is one of the most popular designs on the market for commercial buildings. PBR Panel is available in 10 different colors. It features 1.25 high ribs and 12" center intermediate stiffening ribs, this panel is designed for commercial, architectural and post frame applications. Rush River Steel and committed to giving you a standard 26 (0185m) gauge panel as a standard thickness for Tuff Rib Panel.

### Drip Stop:

Are you tired of condensation dripping all over your valued equipment, livestock and valued possessions? We have solved the dripping problem with applying DripStop to the underside of our panels. (Optional)

DripStop anti condensation felt is self-adhesive and is applied to the metal panel in the roll forming process. As a result, DripStop arrives at the building site already in place and set to be installed with the roofing panels immediately. The membrane is resistant to aging, and also provides an additional layer of protection for your metal roof. The roof panel with DripStop anti-condensation felt provides a medium for trapping this moisture in the specially designed pockets formed in the membrane. DripStop holds that moisture until conditions go back below the dew point and it is released back into the air in the form of normal humidity.
